

Freshman Bot

Expert User Guide

Overview

The Freshman Bot receives questions from students and routes them directly to you in Telegram. Your job is simple: read the question, reply to it, and the student instantly receives your answer. No app switching, no dashboards — everything happens inside Telegram.

■ *Important: You must start a chat with the bot before you can receive any questions. Open the bot and tap **Start**.*

Getting Started

Before the bot can send you questions, complete these two steps:

- Open the Freshman Bot in Telegram.
- Tap **Start** (or send /start). This allows the bot to message you.
- Ask your admin to run **/pingexperts** to confirm you are reachable.

How Questions Arrive

When a student submits a question, you receive a message from the bot that looks like this:

■ New question from Ali (@ali123) (Program: SAT):

When does the next SAT prep course start?

Reply to this message to send your answer to the student.

Answering a Question

To answer a question, you **must use Telegram's reply feature** on the question message:

- Long-press (mobile) or right-click (desktop) the question message.
- Tap **Reply**.
- Type your answer and send.

The student receives your answer immediately. You will see:

■ **Your answer has been sent to the student.**

■ *Do NOT send a new message without replying — the bot won't know which student to forward it to.*

Sending a Clarification

If a question has already been answered but you want to add more information:

- Reply to the original question message.
- Send the command:

/clarify

- Type your clarification and send it (no need to reply this time).

The student receives the clarification along with the full conversation history.

Commands Reference

Command	What it does
/clarify	Add a follow-up to a question you already answered. Reply to the question first, then send /clarify.

Common Situations

Situation	What to do
You type a message without replying	Bot tells you to use the reply feature. Long-press the question and tap Reply
Question was already answered	Bot says it's already answered. Use /clarify (with a reply) to add more info.
You don't receive any questions	You may not have started the bot. Open it and tap Start, then ask admin to n

Expert Account Limitations

Your Telegram account is registered as an expert account. This means the bot is configured to route student questions to you — it is **not a student account**. The following features are **not available** to you when using the bot from your expert account:

- Browsing programs (SAT, Admissions, Full Support, etc.)
- Getting booking or registration links
- Submitting questions as a student
- Any other student-facing menu or flow

■ *If you need to use the bot as a student, do so from a separate personal Telegram account that is not registered as an expert.*

Quick Checklist

- I have opened the bot and tapped **Start**.
- Admin has confirmed I am reachable via **/pingexperts**.
- I know to **reply** to the question message to send my answer.
- I know to use **/clarify** (with a reply) for follow-up information.
